more than a brand for 20 years

in-lite is more than an outdoor lighting brand. We are a company with a mission - for the past 20 years. Every day since 1999, a team of enthusiastic professionals has worked to make outdoor spaces exceptional. Our focus is on developing attractive and high-quality outdoor lighting but, above all, on inspiring as many people as possible and showing how no outdoor space should be without lighting.

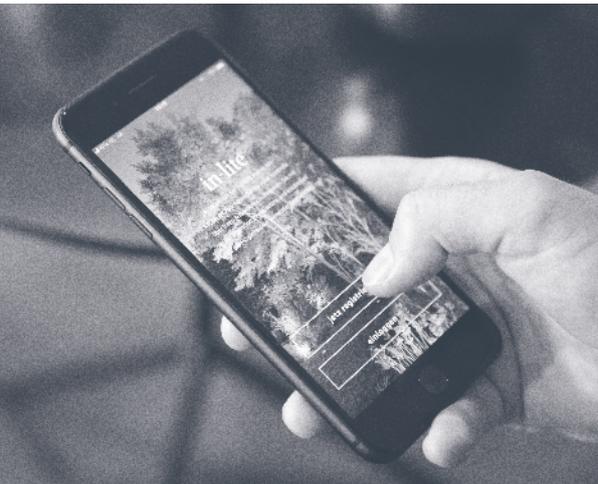

This development has gained considerable momentum in the Netherlands and other countries in recent years. More and more people are realizing the added value of a beautiful, green yard and are willing to invest in it. They consider their yard an extension of their home and want to spend as much time as possible here together with family and friends. It goes without saying that lighting is an important part of this. After all, lighting lets you enjoy your yard twice: during the daytime and at night.

JÜRGEN VAN DIJK
IN-LITE HQ

At the same time, today's consumers are more critical than back in 1999. And rightfully so. We are increasingly aware that we need to take action to protect the environment. This responsibility is one we take seriously as a company. In recent years, for example, we have discontinued producing fixtures with a fluorescent lighting source. We have also reduced the amount of plastic in our packaging. And all LEDs in our fixtures now have a more sustainable footprint and we are ready to switch to new and more efficient transformers, the ultimate model being our SMART HUB-150.

SMART HUB-150

The ultimate
fixture control
mechanism
using a
smartphone

With the SMART HUB-150 (available from fall 2019), we are not only introducing a major technological advancement, but also a transformer that makes outdoor spaces more sustainable in several ways. This transformer is equipped with three separate lines (controlled using an app for iOS and Android phones), offering homeowners a user-friendly way to operate their lighting and determine which zone should be illuminated when.

At in-lite, we have a very clear idea about the future and the steps we would like to take. After all, we have learned a great deal over the past 20 years and apply this knowledge daily in developing new products. We will continue to innovate, inspire and support customers when purchasing lighting for their outdoor spaces.

DESIGN & PRODUCTION / *PURE DUTCH DESIGN*

in-lite has been designing its own fixtures for more than 20 years. Our Product Development teams works daily on developing, designing and testing new fixtures and system parts. Only the very best materials are used, such as high-quality finished aluminum and plastics with the best properties for outdoor use. This provides in-lite products with the best possible protection from the elements, such as heat, cold, rain and snow.

We use only superior quality LED lights. These LEDs have the best qualities for outdoor use, including a long service life and high output. Most important is that the LEDs we use in our fixtures all have a very high color rendition. This produces the most attractive colors, contrasts and textures in your yard after dark.

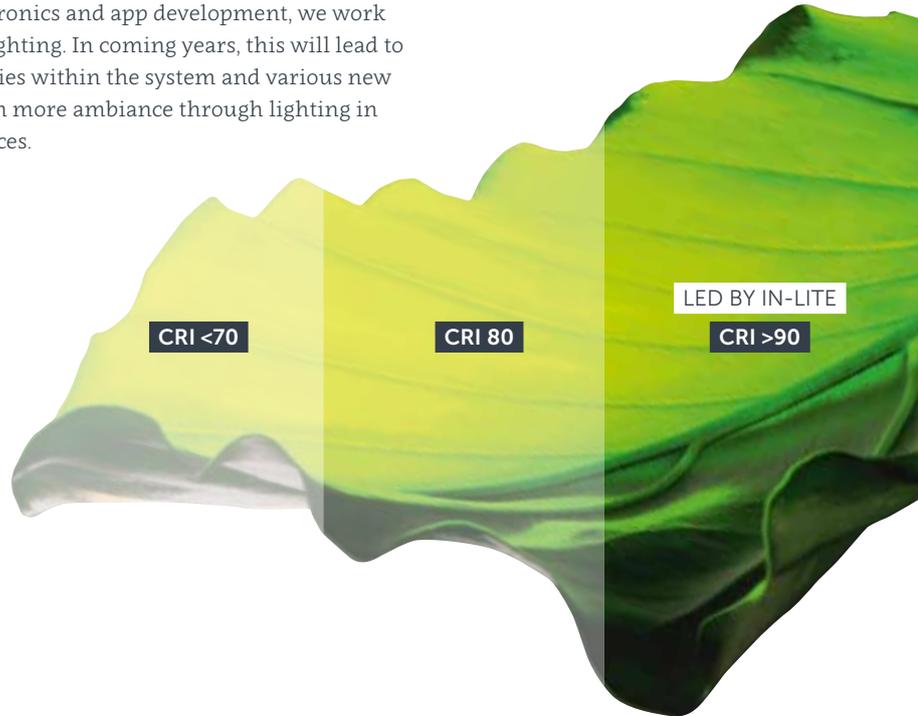

High-quality development

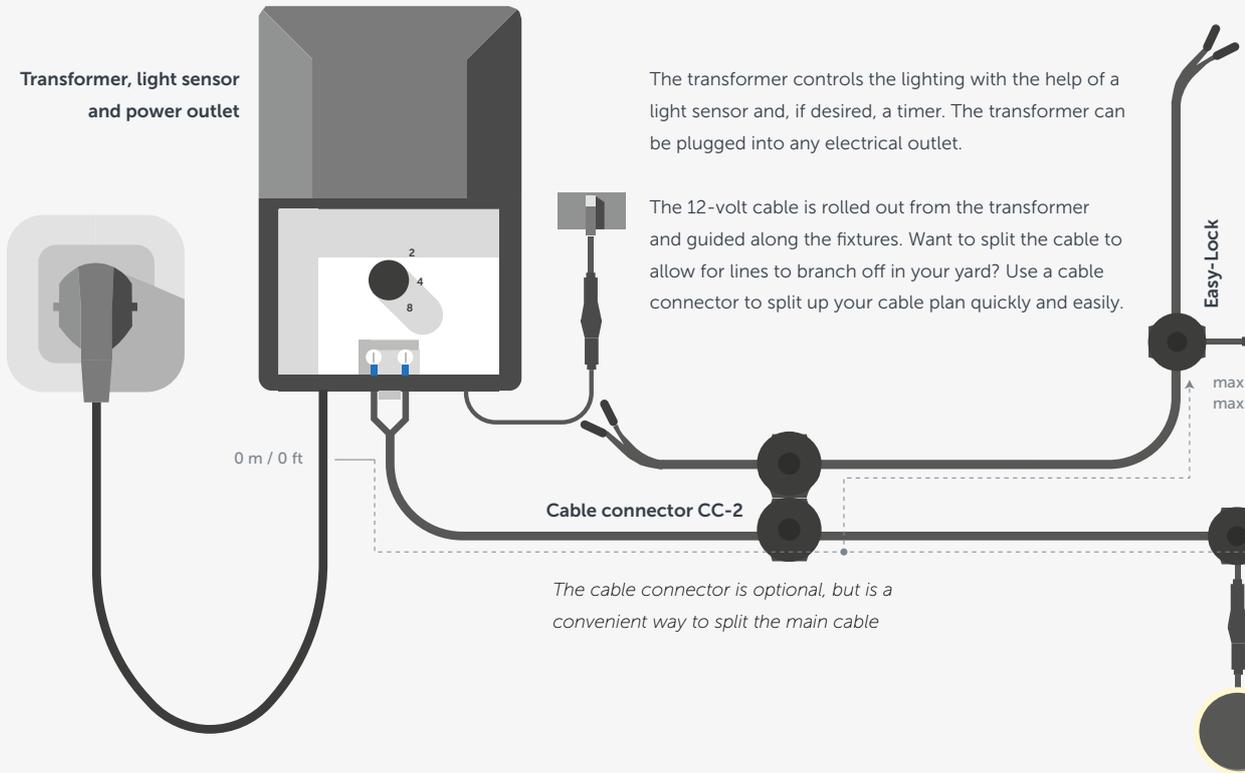

For more than 20 years, we have been working intensively with the same partner. This has resulted in high-quality, reliable and user-friendly products produced in a responsible working environment under excellent working conditions. Together with this team, external designers from the Netherlands and elsewhere and specialists in electronics and app development, we work hard to shape the future of outdoor lighting. In coming years, this will lead to new developments, extra functionalities within the system and various new lighting solutions that will create even more ambiance through lighting in small, medium and large outdoor spaces.

Color rendition

The color rendition (also referred to as CRI) of a light source is an important property. CRI stands for Color Rendering Index, which refers to the extent to which the light source is able to display all colors of the color spectrum. If a light source is able to display all colors, resulting in perfect color rendition, this means that this light source has a CRI of 100. The maximum CRI is equivalent to sunlight since, during the daytime, we experience all colors at their natural best. At in-lite, we believe that all LEDs in our fixtures should have a CRI of 90 in order to offer the best possible experience in the outdoor space. And this has been the case since 2018. Our goal is a vibrant and beautifully illuminated outdoor space, so that the yard looks just as exquisite at night as during the day.

THE 12V IN-LITE SYSTEM / SIMPLE & FLEXIBLE

Transformer, light sensor
and power outlet

The transformer controls the lighting with the help of a light sensor and, if desired, a timer. The transformer can be plugged into any electrical outlet.

The 12-volt cable is rolled out from the transformer and guided along the fixtures. Want to split the cable to allow for lines to branch off in your yard? Use a cable connector to split up your cable plan quickly and easily.

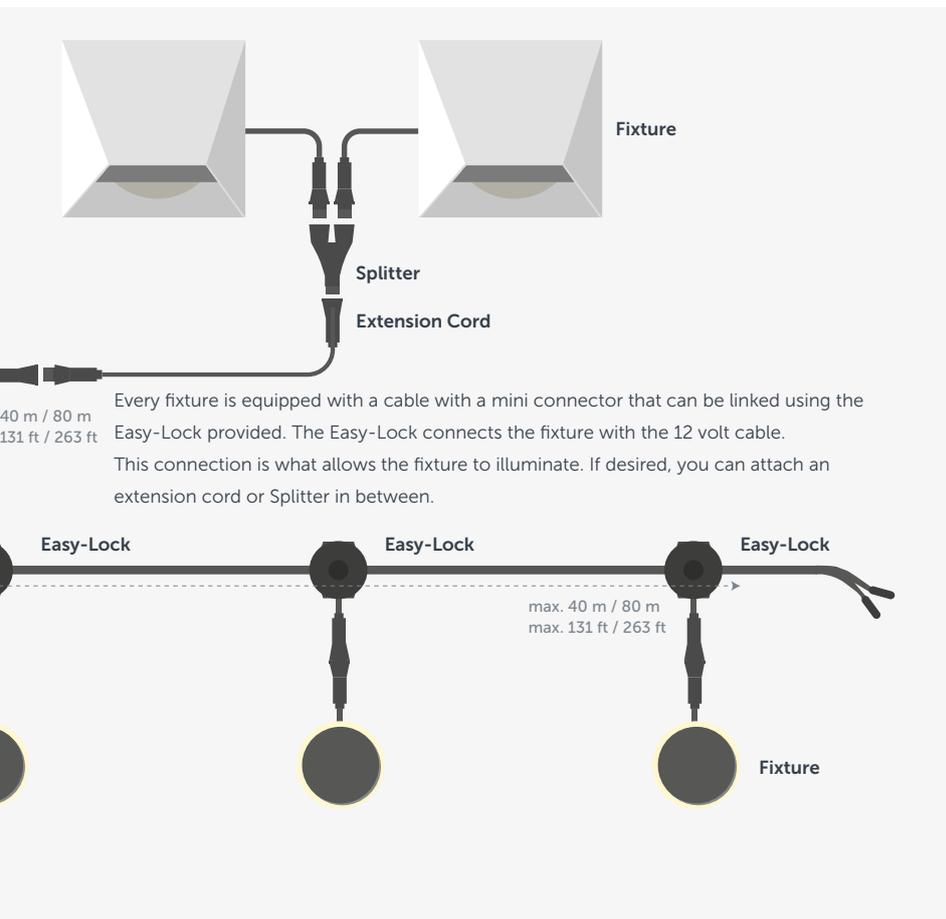

0 m / 0 ft

Cable connector CC-2

Easy-Lock

max.
max.

The cable connector is optional, but is a convenient way to split the main cable

in-lite outdoor lighting is based on low voltage (12 volts), making it easy and safe to install. Unlike 230 volt fixtures, any landscaper or handy consumer can and is allowed to install in-lite lighting. Want to move the lights in the future? No problem. Simply remove the Easy-Lock from the cable and install it elsewhere. The in-lite cable is designed to prevent such problems as a short circuit or corrosion. This means you can enjoy a beautifully illuminated yard for many years to come.

Want to learn more about installing the in-lite system? See [in-lite.com/installation-tips](https://www.in-lite.com/installation-tips)

THE 12V IN-LITE SYSTEM / EASY TO EXPAND

OPTION 1

2 X SCOPE | 1 X ACE UP-DOWN DARK 100-230V
CB-056/M | CBL-40 14/2

OPTION 2

2 X SCOPE | 1 X ACE UP-DOWN DARK 100-230V
2 X ACE DOWN DARK | 4 X MINI SCOPE | 2 X NERO
2 X MINI SCOPE | CB-056/M | CBL-40 14/2

Since in-lite lighting is so safe and easy to install, it offers ultimate flexibility.

Want to update or expand your outdoor lighting? No problem! You can easily connect new in-lite fixtures to your existing systems, provided the power consumption of the lights does not exceed the output limit of the transformer.

Professional

in-lite lighting is an exceptional choice for yard professionals, such as landscapers, gardeners and landscape designers. The in-lite product range comprises fixtures that offer a practical lighting solution, making it easy for professionals to create an outdoor space with attractive and inviting lighting. The in-lite system can also be easily incorporated into the establishment of a new yard or during the renovation of an existing one. Over the years, a very large number of landscapers and designers have become familiar with our product and integrate in-lite lighting in their yards.

PRODUCT RANGE / *CREATING LIGHTING AMBIANCE OUTDOORS*

The fixtures in the in-lite range can create lighting ambiance in any outdoor space. A selection of this range is shown on the following pages. These products are grouped into the following categories: ground lights, bollards, wall lights, outdoor spotlights and surface lights. A combination of fixtures from these categories lets you make your outdoor space exceptional.

GROUND SPOTS / INTEGRATED

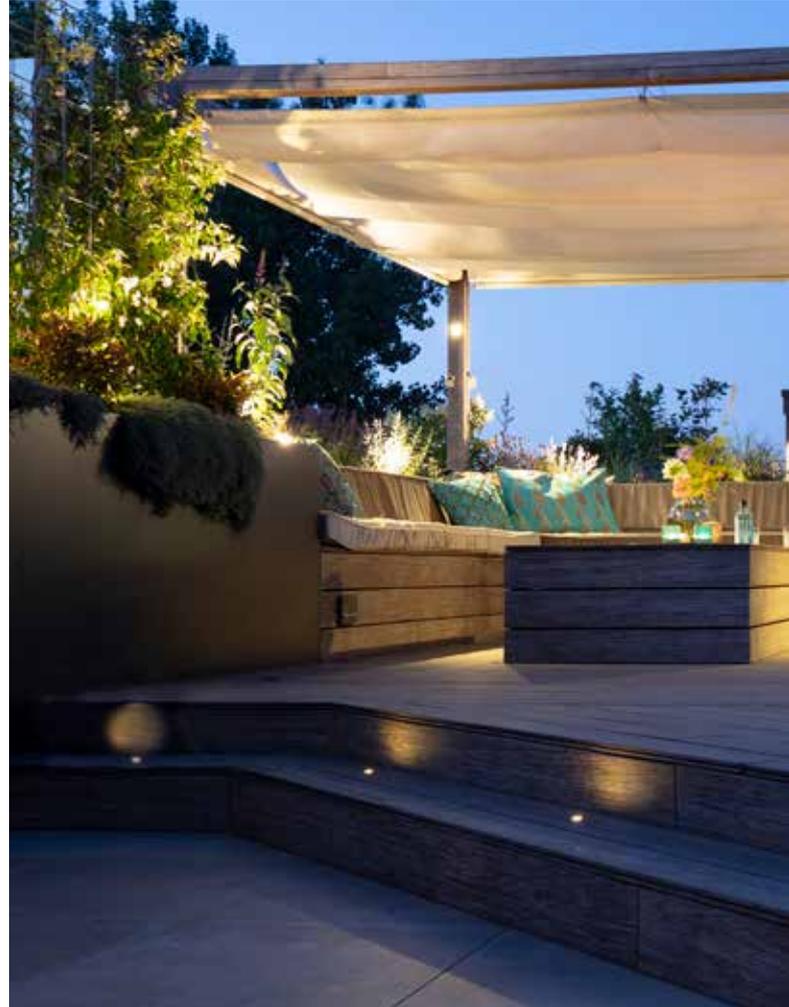

The products in the ground spots category let you turn any deck, duckboards, driveway or path into a genuine eye-catcher. Ground spots are available in different sizes and with different light distributions. The following pages show a selection of ground spots and their various uses.

FUSION 22

FUSION

With the products in the FUSION series, you can turn your deck, walkway or steps into a genuine eye-catcher. The ground lights in this series emit a warm soft light, so they can be installed virtually anywhere in the yard.

PUCK 22 DARK

■ Rosé Silver ■ Dark

The PUCK is a new integrated in-lite concept specially developed for use as indication lighting along a driveway, path, duckboards or jetty.

NERO

The NERO is a ground light that can illuminate trees and house walls of up to 6 meters / 20 feet in height.

BOLLARDS / SOLITARY

The products in the bollards category provide greater ambiance to the greenest of borders. They are also perfect for illuminating pathways and driveways. Want to view the entire range? Visit our website or an in-lite dealer for more information.

LIV LOW

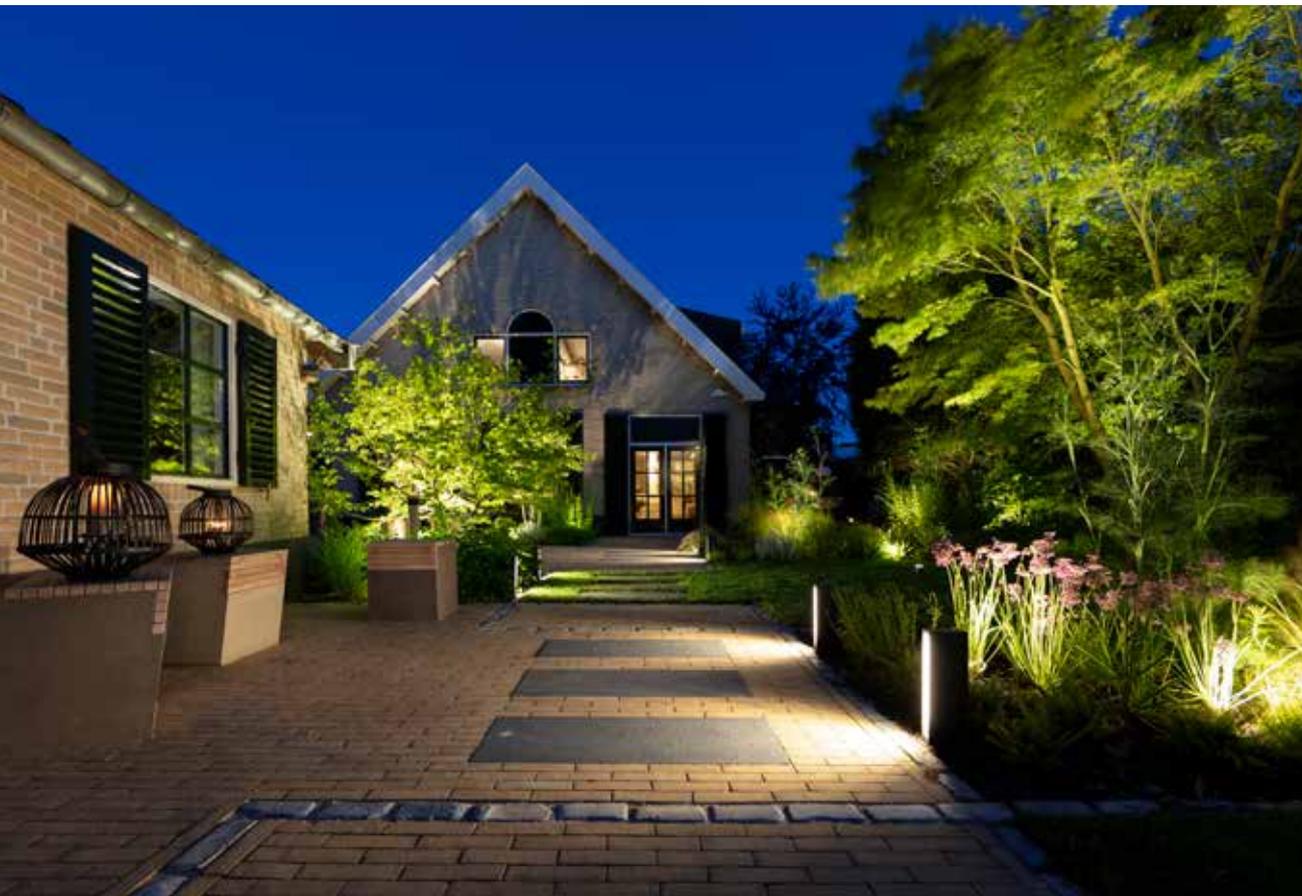

■ Rosé Silver ■ Dark ■ White ■ Corten

The LIV LOW is the lower version of the LIV bollard. The LIV emits light on all sides to create ambiance, making it perfect for use among plants, along a path or deck.

The tilting light source of the ACE lets you illuminate everything from the narrowest path to the widest driveway with this fixture.

EVO LOW DARK

■ Dark

EVO DARK

■ Dark

Looking for an eye-catcher in your outdoor space? The EVO DARK is just what you need. This bollard is best suited for wide pathways and driveways.

WALL LIGHTS / WALL

The wall lights are available in a range of sizes and types with different light effects that let you perfectly illuminate every element in the yard. Looking for a sleek fixture or prefer rounded shapes? You'll always find the perfect match in the in-lite range.

WEDGE SLIM DARK

■ Dark

WEDGE

■ Rosé Silver

■ Dark

■ White

The various wall lights in the WEDGE series can be easily combined for a unique look in the yard.

Want to see inspiring examples of our lighting in outdoor spaces? Have a look at in-lite.com

ACE DOWN

■ Rosé Silver ■ Dark ■ White ■ Corten

In addition to Rosé Silver, Dark and White, various outdoor lights are also available with the Corten look, for a special effect in any yard.

HALO DOWN DARK

■ Dark

New to the in-lite range is the HALO series of wall fixtures. These high-quality wall lights have a luxurious look & feel.

OUTDOOR SPOTLIGHTS / SPOTS

in-lite spotlights are perfect for illuminating everything from small bushes and ornamental grasses to tall trees and hedges. The spotlights are available in a range of light distributions and light angles. More information can be found at in-lite.com

MINI SCOPE

SCOPE

The SCOPE is perfect for illuminating narrow trees up to around 6 meters / 20 feet in height. The MINI SCOPE is a multifunctional spotlight for illuminating plants and low trees.

Placing the MINI SCOPE DUO between tall ornamental grasses or bushes lets you beautifully illuminate the area from both below and above.

BIG SCOPE NARROW

The BIG SCOPE NARROW lets you illuminate tall narrow trees from below.

MINI SCOPE DUO

Perfect for illuminating a deck, walkway, driveway and steps.

SURFACE LIGHTS / SURFACE

Surface lights are installed directly on or under a surface, such as a ceiling, steps or pond edge. The fixtures in this category let you easily create indirect lighting effects and add ambiance to sitting areas.

EVO HYDE 180 DARK

■ Dark

EVO HYDE 550 DARK

■ Dark

The LED strip in the EVO HYDE series are perfect for installing under steps, pond edges, water outlets and overhangs in wall elements.

MINI SCOPE CEILING

Pergolas, overhangs and verandas have become an integral part of today's outdoor spaces. The MINI SCOPE CEILING is the perfect way to illuminate these from above.

SERVICE & WARRANTY / *FROM DEALER TO CONSUMER*

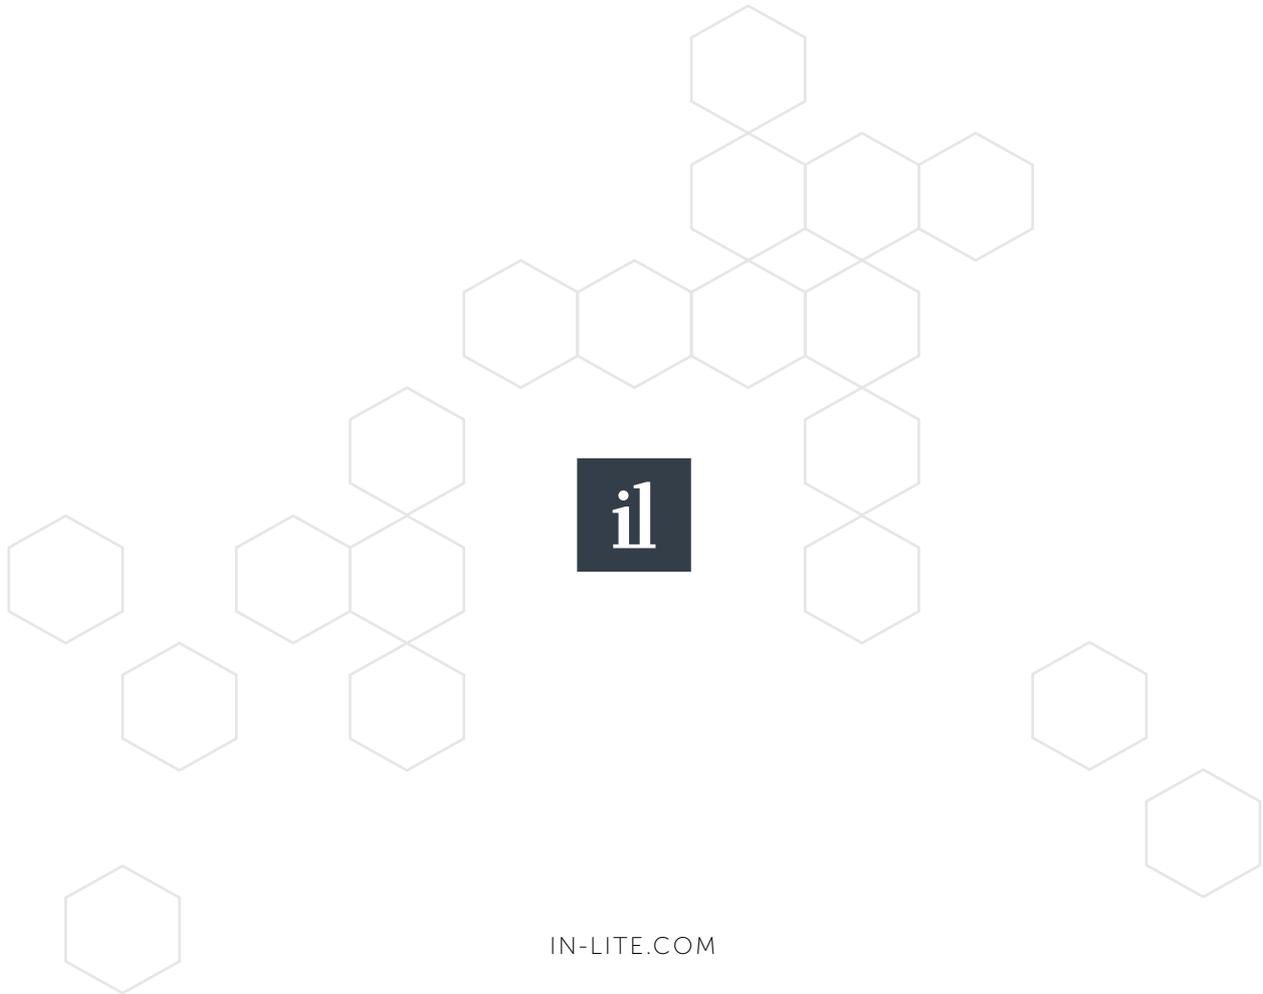

We devote a considerable amount of attention to the quality of our products and want you to be able to fully enjoy your lighting. That's why we provide a 5 year warranty on all our fixtures and transformers.

5 we offer a five-year warranty

Do you have a question, need advice or have a defective product? We take every request we receive by e-mail or phone very seriously. We are not pleased until you can enjoy your lighting without any worries or concerns!
